

## Field Hockey Goal Net

**90010:** Knotless field hockey goal net in approx.

3 mm high tenacity. Made from polypropylene.

Mesh size 4.5 cm, width 3.66 m, height 1.80 m,  
top depth 90 cm, bottom depth 120 cm.

Green colour. Made in Spain.

**90000:** Knotless field hockey goal net in approx.

2.5 mm high tenacity. Made from polypropylene.

Mesh size 2.5 cm, width 3.66 m, height 1.80 m,  
top depth 90 cm, bottom depth 120 cm.

Green colour. Made in Spain.

### **Maximum resistance and reliability**

*This new line of knotless nets made of high tenacity polypropylene represents a new concept of net and it has been possible thanks to the use of the latest technologies.*

*All Gold Line nets have been produced according to technical specifications specified in every European Norm regarding sport nets.*

- Recyclable 100%.
- Specific weight 0,91, lighter than water.
- 100% inert (does not produce bacteria).
- Antiallergic 100%.
- Not eatable by any insects (moths, for example).
- Does not accumulate static electricity.
- High resistance to abrasion.
- High protection against ultraviolet rays (**lost of energy inferior to the polyamid nets**).
- Keeps the tenacity in acid and alkaline environments.
- Low absorption of water (0,05 %, it is one of the lowest factors in all the fibres).
- Good thermic insulator.
- It does not affect any acid except xilen at the boiling point.
- Being a non absorbent fibre it is resistant to grime and offers the highest protection from stains.
- Easy assembly.
- It is not necessary to stabilize it dimensionally through thermofixing of the knots. It does not have knots (new technology). There is no possibility of knots moving.
- They come in different colours (green, blue, red, etc.).
